yaml file is like an xml or json file and is used with softwares like kubernetes.

sample xml data

```xml
<manager>
<employee>
<employeeid>1</employeeid>
<employeename>Raman</employeename>
<employeedesignation>Software Engineer</employeedesignation>
<employeesalary>100000</employeesalary>
</employee>
<employee>
<employeeid>2</employeeid>
<employeename>Aman</employeename>
<employeedesignation>Associate Software Engineer</employeedesignation>
<employeesalary>80000</employeesalary>
</employee>
</manager>
```

Conversion of the above xml data to yaml file

yaml file ends in yaml extension

yaml code

```yaml
manager:
  employee:
   - employeeid: 1
     employeename: Raman
     employeedesignation: Software Engineer
     employeesalary: 100000
   - employeeid: 2
     employeename: Aman
     employeedesignation: Associate Software Engineer
     employeesalary: 80000
```

online website to convert xml to yaml file or data and yaml files can be edited in notepad++
